EDUCATION

University of Wisconsin-Madison

Sep. 2023 - May 2027

Bachelor of Science in Computer Science & Economics

Madison, WI

- Cumulative GPA: 3.72/4.00
- Coursework: Big Data, Computer Architecture, Data Structures & Algorithms, Databases, Matrix Methods, AI
- Involvements: LeetCode Club, Google Developer Group, Capital Management Club, Economics Student Assoc.

EXPERIENCE

Software Engineering Intern @ Google

May 2026 – Present

Google

Mountain View, CA

- Working on 5+ high-impact UI enhancements across Google Photos, improving consistency and user workflows
- Engineering an automated data migration solution, eliminating manual effort and accelerating onboarding
- Delivering 7+ cross-functional initiatives across frontend, backend, and platform optimization efforts

Teaching Assistant - Big Data

Jan. 2026 – May 2026

University of Wisconsin-Madison

Madison, WI

- Mentored students in Spark, Docker, and BigQuery debugging via office hours and structured guidance sessions
- Analyzed system, memory, and network failures to teach root-cause reasoning and scalable fixes efficiently
- Coordinated and proctored exams, handling issues calmly and enforcing policies under time pressure windows

Artificial Intelligence Intern

June 2025 – Jan 2026

Anvian Innovations

Dover, DE

- Reduced inference latency ~20%, enabling faster AI responses that improved real-time reliability for client systems
- Built CI-integrated eval scripts (~70% coverage), cutting deployment errors and raising overall team confidence
- Delivered 4+ production-ready features merged into live systems, accelerating release cycles and user adoption

Teaching Assistant - Micro Economics

June 2025 – July 2025

University of Wisconsin-Madison

Madison, WI

- Boosted engagement & performance for 50+ students by leading interactive polls and group discussion sessions
- Held 1-hour discussion sections 3 times a week and offered office hours to help students clarify their doubts
- Partnered with faculty to organize 5 field trips and streamline course materials, serving ~200 students weekly

PROJECTS

Legacy Code Translator (ML Model) | Python, Transformers, NLP, PyTorch

May 2025 – Present

- Built ML model translating C-to-Python with ~70% accuracy, modernizing outdated systems for developer reuse
- Designed tokenization pipeline with CI checks, boosting throughput by ~15% and reducing syntax errors by ~8%
- Benchmarked thousands of C-Python pairs, identifying bottlenecks and guiding improvements for enterprise scale

OptiStocks | Python, TypeScript, Git, Financial Analysis, Risk/Budget Allocation

November 2024

- Developed stock recommender outperforming S&P 500 with ~13% annualized return over 5yrs of back-tested data
- Created backend APIs and dashboards simulating 100+ portfolios in <2s, accelerating financial decision testing
- Integrated Yahoo Finance API streaming 500+ tickers/min, triggering <1s alerts to support real-time trading

FutureGram | React, JavaScript, Node.js, Firebase, Git

October 2024

- Built social app with 100+ beta users; boosted avg session length ~25% by introducing time-locked post mechanics
- Strengthened reliability by implementing Firebase auth/sync, reducing login errors ~90% during QA testing
- Delivered mobile-first React UI with CI-tested components, improving retention and user engagement

SKILLS

Languages: Java, Python, C, C++, TypeScript, JavaScript, SQL, Swift

Frameworks: React, Angular, Node.js, FastAPI, Django, Flask, REST APIs

Systems & Infrastructure: Linux, Docker, Kafka, Spark, gRPC, PostgreSQL, Firebase, AWS

Machine Learning & Data: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy
